## EVLA Design Team's Milestones

• Reviewed and agreed upon

- Each component's functionality
- How components interact with each other
- How users interact with components
- What **type** of information is passed
- Order of Magnitude Size, bandwidth, speed, periodicity, etc.

We do not define specifics, instead we create a design capable of handling all specifics as they become available.

- For each Data Flow identified in previous step:
  - Data Protocols (XML, HTML, binary ...)
  - Transmission Protocols (TCP/UDP ...)
  - Schema Usage (but not schema contents)

This is where we do the first and only 'how' or implementation aspect of our job.

• Final Product
