

High Angular Resolution X-ray and Radio Observations of the Galactic Supernova Remnant G266.2-1.2 (RX J0852.0-4622)

T.G. Pannuti, G. E. Allen, M.D. Filipovic, M. Stupar, P.A. Jones and J. W. Keohane

- G266.2-1.2: a Galactic supernova remnant with an X-ray spectrum dominated by non-thermal emission
- 75 kilosecond *Chandra* observation of luminous northwestern rim
- Fine structure in rim (leading and trailing edges) revealed for first time
- Estimate of maximum energy of cosmic-ray electrons accelerated along rim: $E \approx 40$ TeV
