

# A Multifrequency Study of Extragalactic Jets

Alberto C. Sadun and Paul B. Rimmer - U. Colorado at Denver

## Summary

We have compiled a number of jets in an effort to cross-correlate their characteristics so as to delineate better the FR I/FR II dichotomy.

**Figure** Composite HST image with VLA overlay of 4C 30.31. Shows separation of the lobes to be  $\sim 2$  arcmin (685 kpc).

## Result

A strong correlation between inverse Compton process in jets and FR II sources.
