# EVLA Front-End CDR

## Introduction and Charge to the Front-End CDR Panel

# Charge to the Committee

---

The purpose of the CDR of an EVLA Subsystem is principally to review the following questions:

- (1) Are the detailed requirements for the subsystem complete and adequate?
- (2) Will the designs selected for implementation meet the requirements?
- (3) Are interfaces to other subsystems defined adequately and completely?
- (4) Has adequate attention been given to the production, testing, and maintenance of the equipment?
