

EVLA Monitor & Control Transition System Software

Organization, Budget, Schedules

Organization – ECD Staffing

Organization – ECD Staffing, M&C SW Dev

1. **Hichem Ben Frej – CMP, MIB/module, deformatter port**
2. **Bryan Butler – obs2script, design, software management**
3. **Chunai Cai – deformatter (earlier), Telcal multicast, Telcal display, Flagging (1st version), monitor data archive, monitor data retrieval**
4. **Richard Moeser – user interface software, communications**
5. **Martin Pokorny – WIDAR correlator software**
6. **Bruce Rowen – new correlator controller, WIDAR correlator software**
7. **Kevin Ryan – WIDAR correlator software**
8. **Ken Sowinski – new correlator controller, Telcal, parameters data base, extensive consultation in many areas including but not limited to MIB/module SW, CMP, Vis Pipe, Flagging, IDCAF, VLA antenna screens, plus invaluable assistance with the characterization and debugging of EVLA antenna performance**
9. **Pete Whiteis – MIB/module software, MIB systems sw, Vis Pipe software**

Organization – Effort Contributed Directly to EVLA M&C SW Dev

1. **John Benson – monitor data archive, VLA archive, EVLA archive**
2. **Walter Brisken – IDCAF**
3. **Brent Carlson (DRAO) – numerous, detailed, high quality software specifications, plus many other contributions**
4. **Barry Clark – Observation Executor, extensive consultation in many areas too numerous to mention, plus invaluable assistance with the characterization and debugging of EVLA antenna performance**
5. **Dave Del Rizzo (DRAO) – Real-Time Data Display software**
6. **Ray Ferraro – new correlator controller HW**
7. **Dave Fort (DRAO) – utility & test software for the Station Board**
8. **Clayton Frank Helvey (contractor) – MIB/module software, esp MIB Systems software**
9. **Michael Rupen – Binary Data Format spec, SDM spec, other correl issues**
10. **Pat Van Buskirk – monitor data archive, numerous operational issues**
11. **Sonja Vrcic – Station Board software, WIDAR correlator software**

Organization – Staffing levels

- One (1) EVLA M&C Group Leader
- Nine (9) individuals in the ECD working directly on EVLA M&C software development
- Eleven (11) scientists and engineers making significant contributions directly to &/or actually developing EVLA M&C software
- Many significant contributions from numerous individuals omitted – Gene Cole, Mark McKinnon, Rick Perley, Steve Durand, Jim Jackson, Peggy Perley, VLA Operators, numerous hardware engineers, many others

Organization - Code

- From Jan through June 2006, biweekly code reviews
 - The code reviews will probably be resumed
 - Design reviews have been requested
- CVS used for source code control since earliest days of the project.
 - Agreed upon, standard dir/subdir structure
 - Now transitioning to Subversion
- Maven and make files used for builds
 - Update to Maven 2.0 planned
- Nightly code builds
- Agreed upon system for code distribution

Budget - WBS Categories

- The software categories were formulated in 2001, before there was a software design, so they do not map well onto actual high level software tasks
- The software categories do provide a means of organizing the funds
- The hardware categories do map reasonably well onto reality.

WBS Categories – Transition & Final System

WBS #	Name	M&S Funds or Main Purpose	Other Funds
6.10.01	Mngmnt/Subsys Engnrng	Prof'l Dev, training, etc	Travel
6.10.05.05	Physical Interface	HW: MIB, Analog Board, Slot ID	None
6.10.05.10	Utility Module – M302 & M303	HW: M302 & M302 modules	None
6.10.10	M&C Network: HW & SW	Not admin'd by EVLA M&C	None
6.10.15	M&C Cmptng Systems: HW&SW	Computing platforms, SW, support	Contracts
6.10.20.05	Stabilization of the VLA	No funds, New Modcomp Cmptrs	None
6.10.20.10	Requirements	No funds, used only to track labor	None
6.10.20.15	High Level SW Arch & Design	No funds, used only to track labor	None
6.10.20.20	Test & Dev Support, Antennas	No funds, used only to track labor	None
6.10.20.25	Mid Level Analysis & Design	No funds, used only to track labor	None
6.10.20.30	Test & Dev Support, Correlator	CBE test cluster, track labor	Contracts
6.10.20.35	Detailed Design & Coding	Maint, training	Contracts
6.10.25	Switch Interface Module – M301	HW: M301 Switch module	None
6.10.30	M&C Transition Hardware	HW: F320 FE cntrllr, ACU/FRM IF	None

WBS – 6.10.15, M&C Computing Systems, HW & SW

- Approximately \$1M allocated over the life of the project
- MIB Systems SW: OS, Network stack, Ethernet driver, shell – purchase, port, support
- MIB SW Dev Systems: laptop, toolset, debugger SW & HW
- Oracle license (& support) for the monitor data archive
- Workstations for SW development
- The EVLA M&C computing platforms
- The CMP hardware

Schedules – Planning

- EVLA M&C Software Development Plan
 - EVLA_MandC.mpp, an MS Project worksheet
 - Task sheet view of the current version on CDR web page
 - Task list: basically functional decomposition
 - Start & finish dates, duration
 - Percent complete
 - Predecessors
 - Resources

Schedules – Planning

EVLA M&C Software Goals/Milestones

- Transition System
 - ✓ Support for EVLA antenna hardware development
 - ✓ Support use of EVLA antennas in scientific observations
 - Replacement of the Modcomp-based VLA control system
 - Support WIDAR prototype board tests & prototype correlator
 - Support for design & development of final system architecture: lessons learned, carryover, testbed
- Final System
 - Final System Architecture: Observation Executor, Device Objects, Full Alerts Subsystem, Archive IF, & more
 - Support for full version of WIDAR correlator: Obs Exec, EVLA Telcal, EVLA DCAF, MCCC SW (VCI, config mapping), CPCC SW, MAHs/Dev Drvrs V2, System GUIs, & much more

Replacement of Modcomp-based VLA Control System

- Retirement of the Modcomp-based VLA Control System
- By the end of Q2 2007 (end of June 2007)
- Major Steps remaining:
 - VLA correlator output (Visibility Pipe): mid Jan 2007
 - VLA format archive records (IDCAF): early Feb 2007
 - Monitor and control of VLA antennas: late Feb 2007
 - Monitor and control of VLA correlator: early Mar 2007
 - Operator Training, Modcomp Repl System: starts late Feb 2007
 - Parallel operation & testing: Apr – Jun 2007

Prototype Correlator

- Installation at the VLA site: Jan 2008
- DRAO on-the-sky (OTS) testing: Feb thru mid-May 2008
- Main NRAO responsibilities:
 - Supply delay models & integration control parameters
 - Prototype CBE/FF with Binary Data Format output
 - Archive records (IDCAF2) & Archiving
 - Sufficient post processing capabilities
- An exercise in NRAO-DRAO coordination

Prototype Correlator - Planning
