DRAFT

2 Introduction

This document describes the EVLA correlator cable labeling plan. Included in this plan are cable label sheets, sized appropriately, for the various cable applications. The intent is that these sheets are to be printed by a commercial printer on an appropriate self-adhesive, robust material, and that labels can subsequently be peeled off and attached to cables as described.

Labels are designed such that they attach around the cable and back onto themselves to form a “flag” label.

It is likely prudent that 2 complete sets of labels be printed so that label spares are available in case some get damaged.

This plan does not contain installation instructions for cables, although some installation may be self-evident (e.g. M&C Ethernet cables). Installation instructions are included in separate installation LAD documents.

DRAFT

3 Overview

A greatly simplified overview of all wire and cable connection types in the EVLA correlator is shown in Figure 3-1.

The figure indicates, for each wire or cable connection type, the relevant section of this document containing cable labeling information.

DRAFT

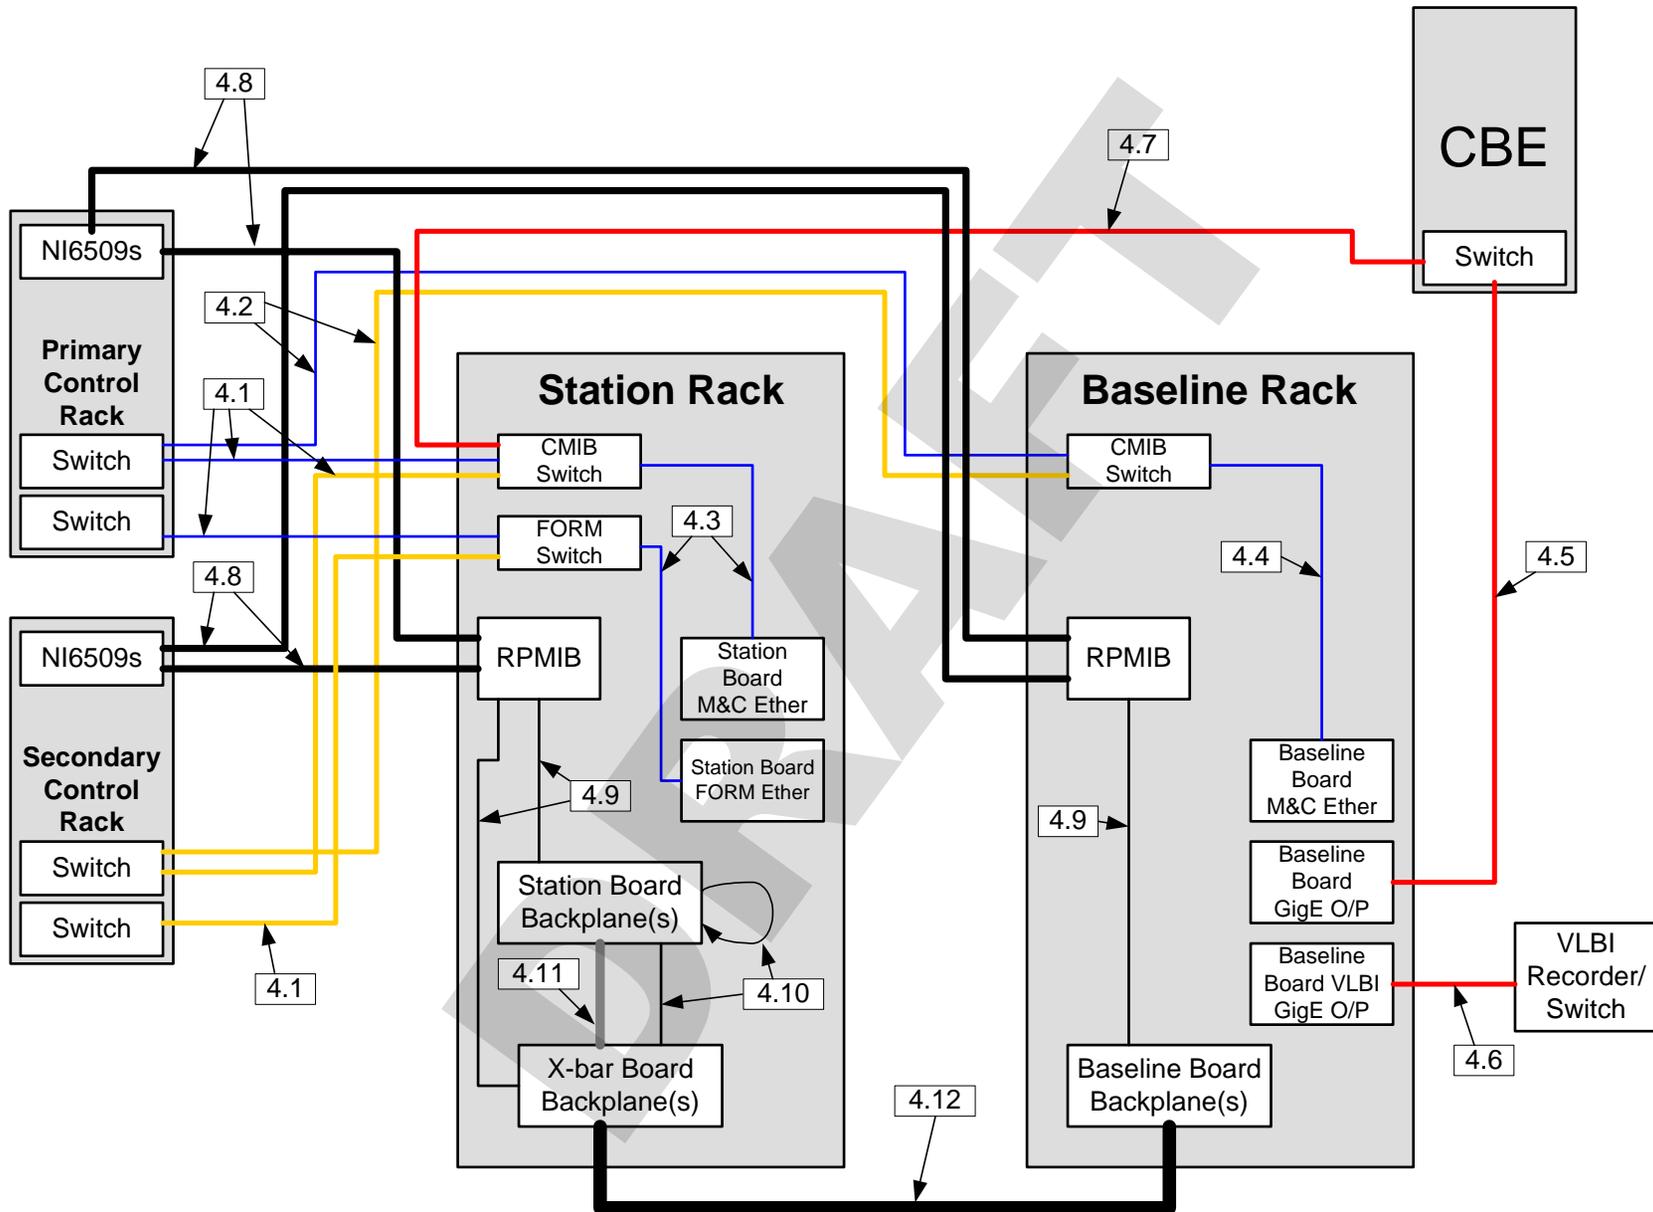

Figure 3-1 Cable types indicating document sections where label details can be found.

4 Instructions

Label nomenclature, instructions for application, quantities required, and label sheets are contained in the following sub-sections.

Refer to appropriate sub-sections as required.

Label dimensions are built so that label sheets are printed, full-size, on 8 ½ x 11 self-adhesive robust material such as soft PVC. Translation of this document to pdf format may shrink the label sheet slightly. The exact dimension between far left and far right vertical lines on each label sheet is 7.5 inches, if scaling correction is required.

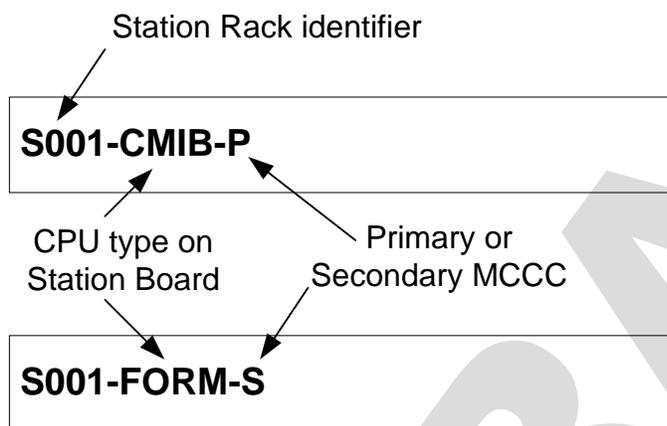

DRAFT

4.1 Station Rack to MCCC/Control Rack M&C Ethernet Cable Labels

Description:

These labels are for Ethernet copper cables (Cat 5e/6) running from Station Rack switches to Control Racks' switches. There is one primary (P) and secondary (S) cable to each primary and secondary Control Rack switch. Inside the Station Rack there are two switches, one for Station Board CMIBs and one for the FORMs. Each switch has 2 cables (P and S) running to the Control Racks.

Nomenclature:

Application:

Apply one label to each end of each Cat5e/6 Ethernet cable; one cable running from the rack switch to the RJ-45 coupler outside the rack, and one from the RJ-45 coupler to the Control Rack's switch.

Quantity for the system:

Qty=2 label sets.

There are 2 sheets in each set.

4.2 Baseline Rack to MCCC/Control Rack M&C Ethernet Cable Labels

Description:

These labels are for Ethernet copper cables (Cat 5e/6) running from the Baseline Rack Ethernet switch to Control Racks' switches. There is one primary (P) and secondary (S) cable to each primary and secondary Control Rack switch.

Nomenclature:

Application:

Apply one label to each end of each Cat5e/6 Ethernet cable; one cable running from the rack switch to the RJ-45 coupler outside the rack, and one from the RJ-45 coupler to the Control Rack's switch.

Quantity for the system:

Qty=2 label sets.

There is 1 sheet in each set.

4.3 Internal Station Rack M&C Ethernet Cable Labels

Description:

These labels are for Ethernet copper cables (Cat 5e/6) that are internal to each Station Rack. There are two cables running between each Station Board and the CMIB and FORM switches, labeled as appropriate.

Nomenclature:

Application:

Apply one label to each end of each Cat5e/6 Ethernet cable.

Quantity for the system:

Qty=8 label sets.

1 label sheet required for each Station Rack. There is 1 sheet in each set.

4.5 Baseline Rack to CBE Ethernet Cables

Description:

These labels are for Ethernet copper cables (Cat 5e/6) that route from each Baseline Board to the CBE switch(es). There is one cable connection between each Baseline Board and the CBE switch.

Nomenclature:

Application:

Apply one label to each end of each Cat5e/6 Ethernet cable. There are two cables for each connection, one for inside the rack to the exterior RJ-45 coupler, and one from the RJ-45 coupler to the CBE switch.

Quantity for the system:

Qty=2 label sets.

1 set for cables inside the racks, 1 set for cables from the racks to the CBE switch. There are 8 sheets in each set.

4.6 Baseline Rack to VLBI/Phased-Array Network Ethernet Cables

Description:

These labels are for Ethernet copper cables (Cat 5e/6) that route from each Baseline Board to the VLBI/Phased-Array Network switch(es). There is one cable connection between each Baseline Board and the switch(es).

Nomenclature:

Application:

Apply one label to each end of each Cat5e/6 Ethernet cable. There are two cables for each connection, one for inside the rack to the exterior RJ-45 coupler, and one from the RJ-45 coupler to the VLBI/Phased-array network switches.

Quantity for the system:

Qty=2 label sets.

1 set for cables inside the racks, 1 set for cables from the racks to the CBE switch. There are 8 sheets in each set.

4.7 Station Rack to CBE Ethernet Cables

Description:

These labels are for Ethernet copper cables (Cat 5e/6) that route from each Station Rack to the CBE network switch. There is one cable connection between each Station Rack and the CBE switch.

Nomenclature:

Station Rack identifier

Destination: CBE

Application:

Apply one label to each end of each Cat5e/6 Ethernet cable. There are two cables for each connection, one for inside the rack to the exterior RJ-45 coupler, and one from the RJ-45 coupler to the CBE network switch.

Quantity for the system:

Qty=1 label sets.

There is 1 sheet in a set.

4.8 CPCC to RPMIB Centronics Cable Labels

Description:

These labels are for the 100-pin Centronics cables running between the CPCC NI6509 cards and the RPMIBs in the racks. One set of labels is required. Note that for reliability, cables are contiguous from the CPCC NI6509 cards to the RPMIB connectors.

Nomenclature:

Application:

Apply one label to each end of each cable. There are 2 cables for each rack. Label application could be done at the site or beforehand. Cables are custom built for required length.

Quantity for the system:

Qty=1 label set.

1 sheet for the Station Racks, one sheet for the Baseline Racks.
There are 2 sheets in each set.

4.9 Rack Power M&C Wire Labels

Description:

These are labels attached to the single-wire Monitor and single-wire Control lines running between the RPMIB and the backplanes.

Nomenclature:

Application:

Apply one label to the end of the wire terminating at the RPMIB. The location of the other end of the wire is self-evident and is **NOT** labeled.

Quantity for the system:

Qty=6 label sets.

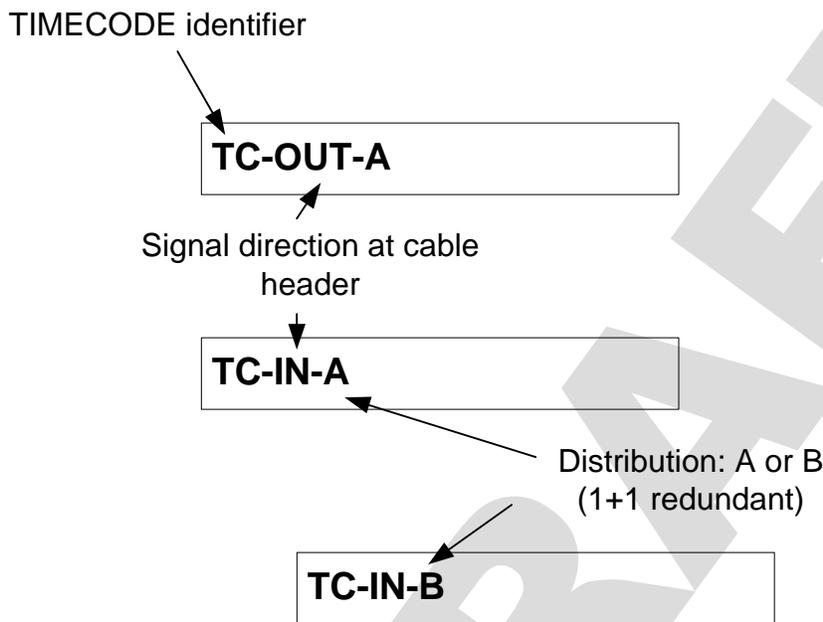

Each sheet is enough for 3 racks, and so 6 sheets are required for the entire system (including eMERLIN).

4.10 TIMECODE Cable Labels

Description:

These are labels attached to both ends of the single-wafer Meritec cables running between racks, between X-bar boards and Station Boards, and between Station Boards.

Nomenclature:

Application:

Apply one label near the cable header at each end of the cable. If the header plugs into an OUTPUT, apply the “OUT” label. If the header plugs into an INPUT, apply the “IN” label. There are 2 separate and redundant TIMECODE “Distribution” networks, “A” and “B”, apply the A and B labels consistently throughout.

Quantity for the system:

Qty=4 label sets.

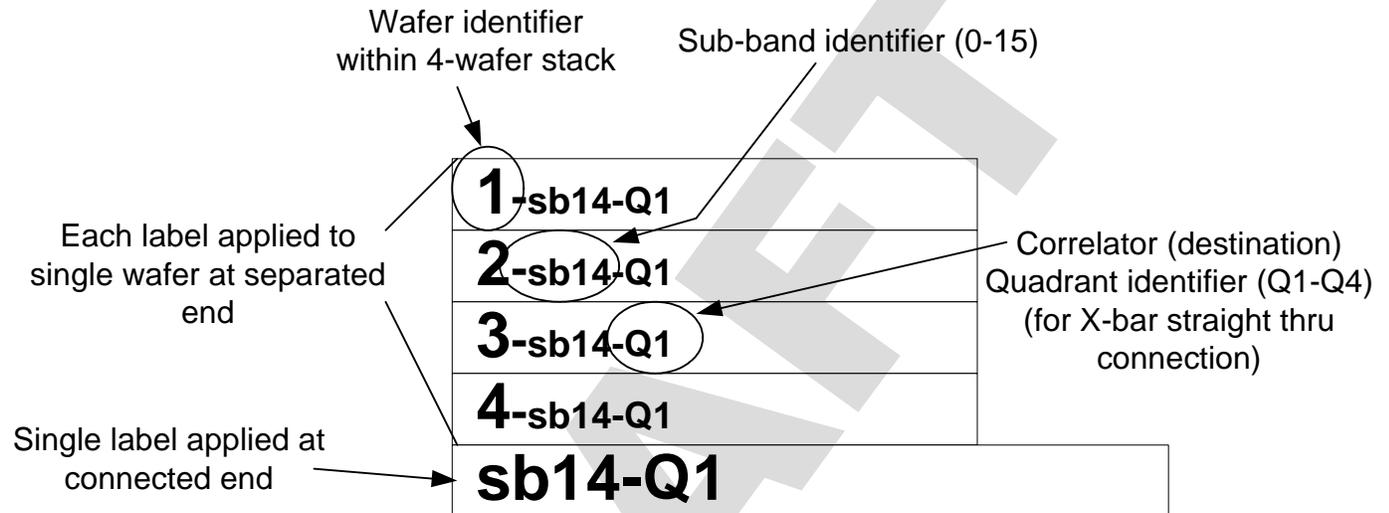

There are 2 sheets in each label set.

4.11 Station Rack 1 m Meritec Cable Labels

Description:

These are labels attached to the 1 m, 4-wafer, Meritec cables running between Station Boards and X-bar boards in Station Racks.

Nomenclature:

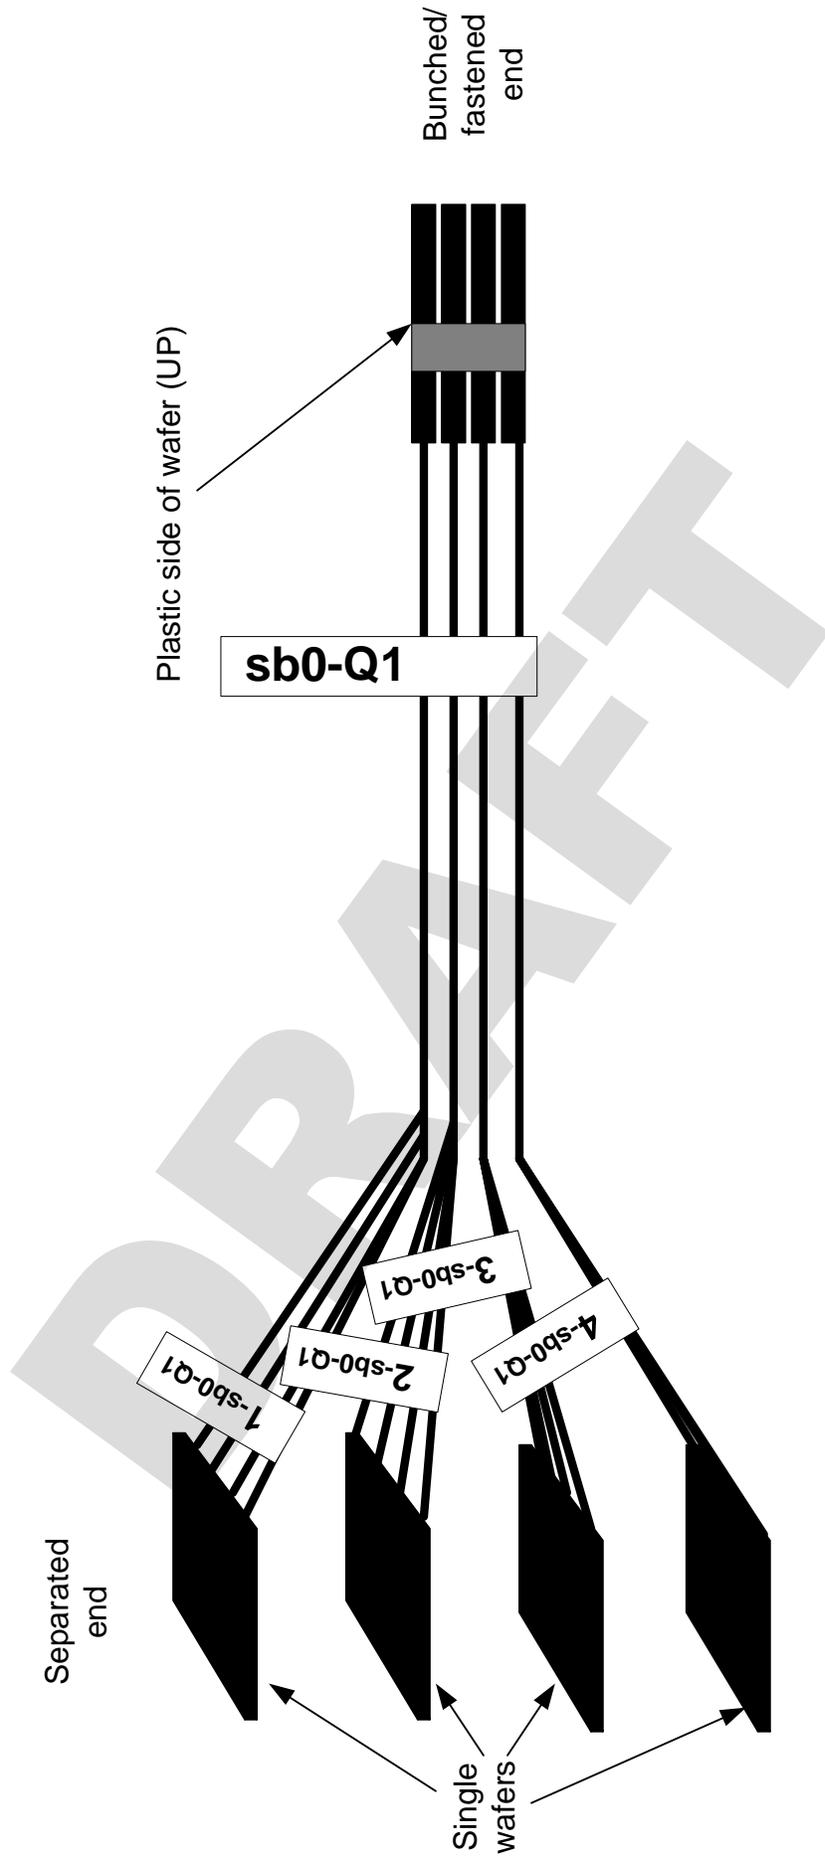

Application:

Apply labels to each single wafer and the connected “bunch” of 4 wafers at the other end. Refer to the diagram on the next page. A cable installation plan is provided separately.

Quantity for the system:

Qty=8 label sets.

There are 8 sheets in each label set. 1 set of labels (8 sheets) is required for *each* station rack, and so 8 sets of sheets (64 pages in total) are required. Each block of 5 labels on a sheet is for one cable. Cables for each rack are labeled identically.

Meritec 1 m cable label detail.

4.12 Station Rack to Baseline Rack Long Meritec Cable Labels

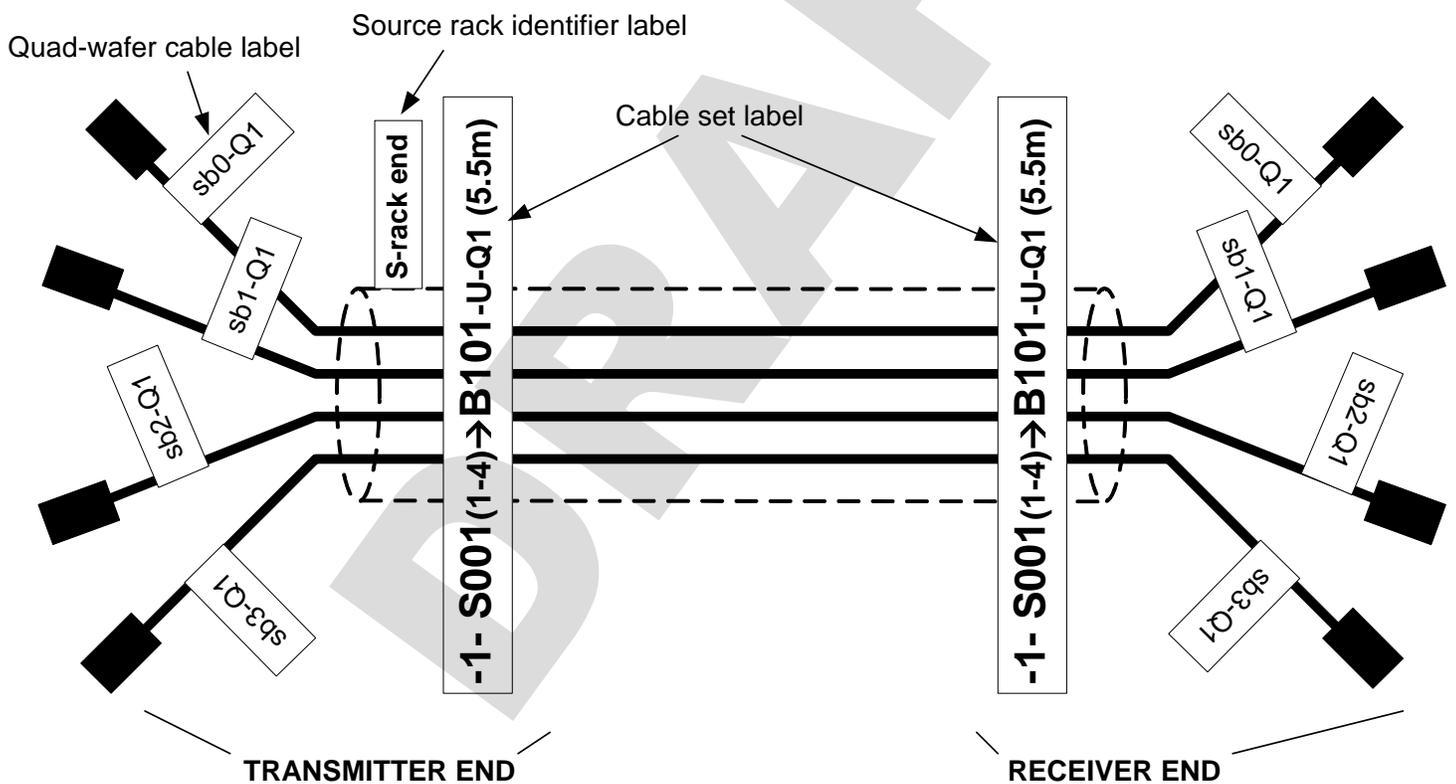

Description:

There are several labels involved for a complete “cable set”. A cable set is comprised of 4 quad-wafer cables, bundled together with an outer sheath, identical in length sourcing from the same rack and terminating at the same rack. There are 128 “cable sets” in the EVLA. Each “cable set” has a unique set of labels and a diagram is provided for each one.

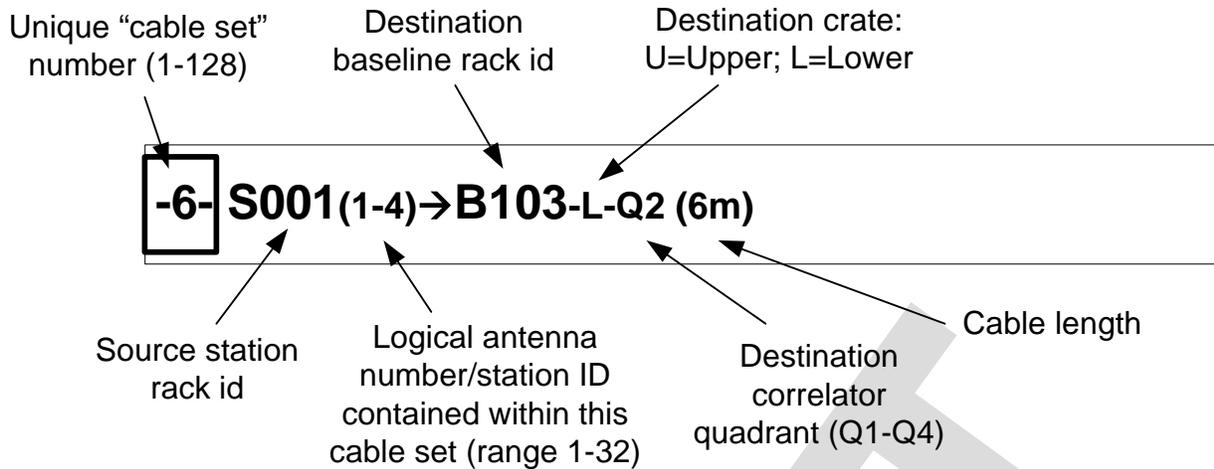

This section contains the labels and label diagrams for 128 complete “cable sets”. A cable installation plan is provided separately.

Nomenclature:

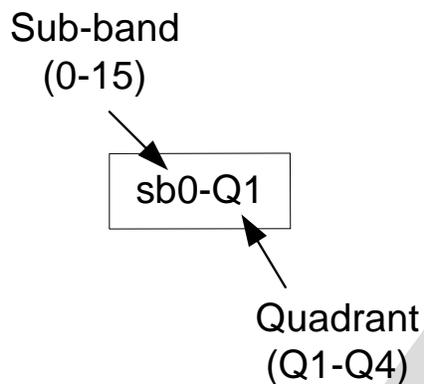

There are 3 different label types applied to the cable as shown below:

Cable set label:

Quad-wafer cable label:

Source rack identifier label:

This "S-rack end" label is the same for each cable set and is applied to indicate the end of the cable that sources at the station rack..

Application:

Apply labels as shown in the above figure. 32 sheets of figures are provided at the end of this section indicating precise label application for each of the 128 cable sets.

Quantity for the system:

As indicated in front of each sheet set as follows.

Quad wafer cable labels

8 sheet sets required.

4 sheets per set.

4.13 **Meritec rack-to-rack “cable set” label application diagrams**

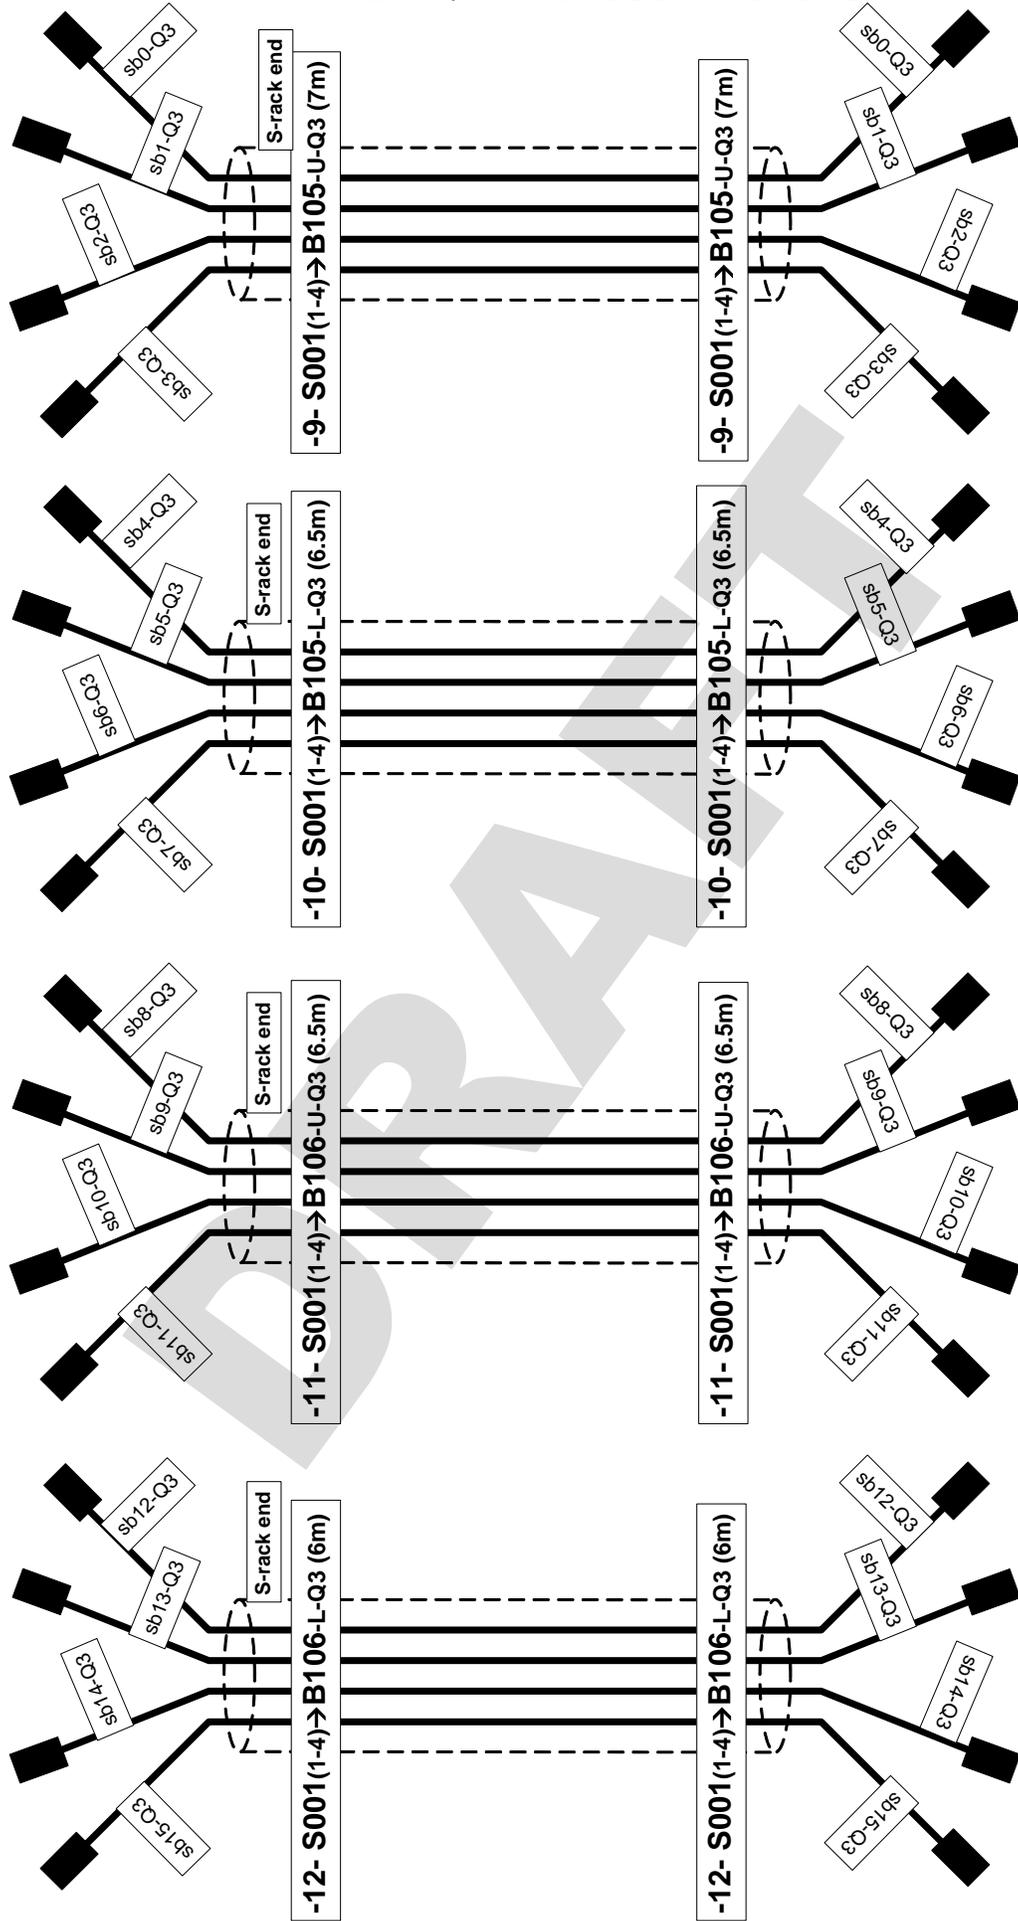

Each cable set is labeled in an identical fashion, but labels for each set are different.

Pay careful attention to labeling for each of the 128 cable sets!
